**East Los Angeles College**  
**Department of Mathematics**

**Math 227**

**Test 2**

Show all work for credit and approximate all probabilities to the nearest **thousandths**.

The following table represents the distribution of marbles.

Color	Number
Yellow	20
Green	12
Blue	14
Purple	6
Total	52

If you select a marble at random, what's the probability the marble is:

- 1) Green?
- 2) Purple?
- 3) Red?
- 4) Non-Purple?
- 5) Yellow or Blue?

What's the odds for selecting:

- 6) Green?
- 7) Blue?

If you select two different marbles, what's the probability the marbles are:

- 8) Both Purple?
- 9) Both non-Purple?

If you select three different marbles at random, what's the probability:

- 10) None are Blue?
- 11) At least one is Blue?

A bin of 200 iPhones contains phones that are defective and non-defective. Past experience indicates that 3% of all bins of iPhone's are defective. If you select two different iPhones at random, what's the probability:

- 12) Both are defective?
- 13) Both are non-defective?
- 14) At least one is defective?

The following table represents degree data from a random sample at a local university.

Degree	Bachelor	Masters	PhD	Total
Men	28	26	12	66
Women	42	28	10	80
Total	70	54	22	146

If you select a graduate at random, what's the probability the graduate earned:

- 15) Bachelor's degree?
- 16) Bachelor's degree given that the graduate was a man?
- 17) Bachelor's degree given that the graduate was a woman?
- 18) What gender was more likely to earn a bachelor's degree?
- 19) PhD?
- 20) PhD given that the graduate was a man?
- 21) PhD given that the graduate was a woman?
- 22) What gender was more likely to earn a PhD?

If you select two different graduates at random, what's the probability:

- 23) They both earned a Master's Degree?
- 24) At least one earned a Master's Degree?
- 25) What is your name?

math 227 Test 2

$$(1) P(G) = \frac{n(G)}{n(S)}$$

$$= \frac{12}{52} \approx \underline{0.231}$$

$$(2) P(P) = \frac{n(P)}{n(S)}$$

$$= \frac{6}{52} \approx \underline{0.115}$$

$$(3) P(R) = \frac{n(R)}{n(S)}$$

$$= \frac{0}{52} = \underline{0}$$

$$(4) P(\text{non } P) = \frac{n(\text{non } P)}{n(S)} \text{ or } 1 - P(P)$$

$$= \frac{46}{52} = 1 - 0.115 \approx \underline{0.885}$$

$$(5) P(y \text{ or } b) = P(y) + P(b) - P(y \text{ and } b)$$

$$= \frac{20}{52} + \frac{14}{52} - \frac{0}{52}$$

$$= \frac{34}{52} \approx \underline{0.654}$$

(6) odds for G

$$n(G) : n(\text{non } G)$$

$$12 : 40 \quad ; \quad 6 : 20 \quad ; \quad \underline{3 : 10}$$

(7)  $n(B) : n(\text{non } B)$

$$14 : 30 \quad ; \quad \underline{7 : 15}$$

(8)  $p(\text{Both purple})$

$$= p\left(\begin{smallmatrix} 1^{\text{st}} \\ p \end{smallmatrix} \text{ and } \begin{smallmatrix} 2^{\text{nd}} \\ p \end{smallmatrix}\right)$$

$$= p\left(\begin{smallmatrix} 1^{\text{st}} \\ p \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 2^{\text{nd}} \\ p \end{smallmatrix}\right)$$

$$= \frac{6}{52} \cdot \frac{5}{51} \quad ; \quad \frac{30}{2652} \approx \underline{0.011}$$

(9)  $p(\text{both non-purple})$

$$= p\left(\begin{smallmatrix} 1^{\text{st}} \\ \text{non } p \end{smallmatrix} \text{ and } \begin{smallmatrix} 2^{\text{nd}} \\ \text{non } p \end{smallmatrix}\right)$$

$$= p\left(\begin{smallmatrix} 1^{\text{st}} \\ \text{non } p \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 2^{\text{nd}} \\ \text{non } p \end{smallmatrix}\right)$$

$$= \frac{46}{52} \cdot \frac{45}{51} = \frac{2070}{2652} \approx \underline{0.781}$$

$$(10) \quad p(\text{non are blue})$$

$$= p\left(\begin{smallmatrix} 1^{st} \\ \text{non} \\ b \end{smallmatrix} \text{ and } \begin{smallmatrix} 2^{nd} \\ \text{non} \\ b \end{smallmatrix} \text{ and } \begin{smallmatrix} 3^{rd} \\ \text{non} \\ b \end{smallmatrix}\right)$$

$$= p\left(\begin{smallmatrix} 1^{st} \\ \text{non} \\ b \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 2^{nd} \\ \text{non} \\ b \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 3^{rd} \\ \text{non} \\ b \end{smallmatrix}\right)$$

$$= \frac{38}{52} \cdot \frac{37}{51} \cdot \frac{36}{50} = \underline{\underline{0.382}}$$

$$(11) \quad p(\text{at least one is blue})$$

$$= 1 - p(\text{non are blue})$$

$$= 1 - 0.382, \approx \underline{\underline{0.618}}$$

$$(12) \quad \text{Defective} = 3\% \cdot 200$$

$$= \textcircled{6}$$

$$\text{note: non-Defective} = 200 - 6$$

$$p(\text{Both Def}) = p\left(\begin{smallmatrix} 1^{st} \\ D \end{smallmatrix} \text{ and } \begin{smallmatrix} 2^{nd} \\ D \end{smallmatrix}\right) = \textcircled{196} \textcircled{194}$$

$$= p\left(\begin{smallmatrix} 1^{st} \\ D \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 2^{nd} \\ D \end{smallmatrix}\right)$$

$$= \frac{6}{200} \cdot \frac{5}{199} \approx \underline{\underline{0.00075}}$$

$$(13) \quad p(\text{both are non-dot})$$

$$= p\left(\begin{smallmatrix} 1st \\ non \\ D \end{smallmatrix}\right) \text{ and } \begin{smallmatrix} 2nd \\ non \\ D \end{smallmatrix}$$

$$= p\left(\begin{smallmatrix} 1st \\ non \\ D \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 2nd \\ non \\ D \end{smallmatrix}\right)$$

$$= \frac{\frac{194}{196}}{\frac{200}{200}} \cdot \frac{\frac{193}{195}}{\frac{194}{194}} \approx \underline{\underline{0.960}} \mid \underline{\underline{0.941}}$$

$$(14) \quad p(\text{at least one is dot})$$

$$= 1 - p(\text{non are dot})$$

$$= 1 - p\left(\begin{smallmatrix} 1st \\ non \\ D \end{smallmatrix}\right) \cdot p\left(\begin{smallmatrix} 2nd \\ non \\ D \end{smallmatrix}\right)$$

$$= 1 - \frac{0.941}{0.960} \approx \underline{\underline{0.040}}$$

$$(15) \quad p(B) = \frac{n(B)}{n(S)}$$

$$\underline{\underline{0.059}}$$

$$= \frac{70}{146} \approx \underline{\underline{0.479}}$$

$$(16) \quad p(B|m) = \frac{n(B \text{ and } m)}{n(m)}$$

$$= \frac{28}{66} \approx \underline{\underline{0.424}}$$

$$(7) \quad p(B|w) = \frac{n(B \text{ and } w)}{n(w)}$$

$$= \frac{42}{80} \approx \underline{0.525}$$

(18) women

$$(19) \quad p(\text{phd}) = \frac{n(\text{phd})}{n(s)}$$

$$= \frac{22}{146} \approx \underline{0.151}$$

(20)

$$p(\text{phd} | m) = \frac{n(\text{phd and } m)}{n(m)}$$

$$= \frac{12}{66}$$

$$\approx \underline{0.181}$$

$$(21) \quad p(\text{phd} | w) = \frac{n(\text{phd and } w)}{n(w)}$$

$$= \frac{10}{80}$$

$$\approx \underline{0.125}$$

(22) men

(23)  $p(\text{Both masters})$

$$= p(\text{1st}^{\text{st}} \text{ and } \text{2nd}^{\text{nd}} \text{ m})$$

$$= p(\text{1st}^{\text{st}} \text{ m}) \cdot p(\text{2nd}^{\text{nd}} \text{ m})$$

$$= \frac{54}{146} \cdot \frac{53}{145} \approx \boxed{0.135}$$

(24)  $p(\text{at least one}) = 1 - p(\text{none})$

$$= 1 - p(\text{1st}^{\text{st}} \text{ non m}) \cdot p(\text{2nd}^{\text{nd}} \text{ non m})$$

$$= 1 - \frac{94}{146} \cdot \frac{93}{145} \approx \boxed{0.605}$$

~~$\boxed{0.557}$~~

(25) Solutions

$$1 - \frac{92}{146} \cdot \frac{91}{145} \quad (\text{OK})$$

$$\approx \boxed{0.605}$$
